Application/Control Number: 10/770,802

Art Unit: 3751

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 31 and 32, drawn to a method of controlling fluid flow, classified in class 137, subclass 12.

Page 2

II. Claims 1-30 and 33, drawn to an apparatus for controlling fluid flow, classified in class 251, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process. All of the apparatus valve species can be used in a process where the valve is either fully on and fully off so that flow through the pipe is either full flow or no flow and thereby not requiring the method step of partially twisting the duct to provide a partial flow rate as claimed.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 4. This application contains claims directed to the following patentably distinct species of the claimed invention:
  - 1) The embodiment with clamped rotating collars as shown in figures 5-11;
  - 2) The embodiment with adhered rotating collars as shown in figure 12;

Application/Control Number: 10/770,802

Art Unit: 3751

3) The embodiment with motor and gear rotating collars as shown in figure 13;

Page 3

- 4) The embodiment with rods on the duct I.D. as shown in figure 14;
- 5) The embodiment with rods on the duct O.D. as shown in figure 15;
- 6) The embodiment with embedded rods along the duct diameter as shown in figure 16;
  - 7) The embodiment with embedded rods on the duct I.D. as shown in figure 17;
  - 8) The embodiment with embedded rods on the duct O.D. as shown in figure 18;
  - 9) The embodiment with slanted rods as shown in figure 19;
  - 10) The embodiment with a threaded housing as shown in figure 28;
  - 11) The embodiment with a spring biased housing as shown in figure 29;
  - 12) The embodiment with a three piece housing as shown in figure 30.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. A telephone call was made to Mr. Barry Dove on 6/17/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Casimer Jacyna whose telephone number is 571-272-4889. The examiner can normally be reached on Wed. thru Fri. 9AM-7PM, Mon. 7AM-1PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Justine Yu can be reached on 703-272-4835. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
